CONVERSION FACTORS, VERTICAL DATUM, AND ABBREVIATED WATER-QUALITY UNITS

Multiply	By	To obtain
acre-foot (acre-ft)	1,233	cubic meter
cubic foot per second (ft ³ /s)	0.02832	cubic meter per second
gallon per minute (gal/min)	0.06308	liter per second
inch (in.)	25.4	millimeter
foot (ft)	0.3048	meter
mile (mi)	1.609	kilometer
square mile (mi ²)	2.590	square kilometer
ton	0.9072	metric ton or megagram

Water temperature is reported in degrees Celsius ($^{\circ}\text{C}$), which can be converted to degrees Fahrenheit ($^{\circ}\text{F}$) by the following equation:

$$^{\circ}\text{F} = 1.8(^{\circ}\text{C}) + 32.$$

Sea level: In this report, “sea level” refers to the National Geodetic Vertical Datum of 1929—a geodetic datum derived from a general adjustment of the first-order level nets of the United States and Canada, formerly called Sea Level Datum of 1929.

Chemical concentration and water temperature are reported only in metric units. Chemical concentration is reported in milligrams per liter (mg/L) or micrograms per liter ($\mu\text{g}/\text{L}$). Milligrams per liter is a unit expressing the solute per unit volume (liter) of water. One thousand micrograms per liter is equivalent to 1 milligram per liter.

Specific conductance is reported in microsiemens per centimeter at 25 degrees Celsius ($\mu\text{S}/\text{cm}$).

SELECTED HYDROLOGIC DATA FOR THE BEAVER DAM WASH AREA, WASHINGTON COUNTY, UTAH, LINCOLN COUNTY, NEVADA, AND MOHAVE COUNTY, ARIZONA, 1991-95

By Michael Enright

ABSTRACT

The hydrologic data in this report were collected in Beaver Dam Wash and adjacent areas of Washington County, Utah, Lincoln County, Nevada, and Mohave County, Arizona, from 1991 to 1995; some historical data from as far back as 1932 are included for comparative purposes. The data include records of about 100 wells, drillers' and geologic logs of selected wells, and results of chemical analyses of water from wells, springs, and surface-water sites. Discharge, water temperature, and specific-conductance measurements are reported for 33 surface-water and spring sites. Daily mean discharge data are reported for two U.S. Geological Survey streamflow-gaging stations on Beaver Dam Wash (1992-95). The data were collected as part of a study done by the U.S. Geological Survey in cooperation with the Utah Department of Natural Resources, Division of Water Resources; the Nevada Department of Conservation and Natural Resources; and the Arizona Department of Water Resources.

INTRODUCTION

This report contains hydrologic data collected in the Beaver Dam Wash area of Washington County, Utah, Lincoln County, Nevada, and Mohave County, Arizona, during 1991-95. Some historical data collected from as far back as 1932 also are included. Most of the data were collected for a study done by the U.S. Geological Survey in cooperation with the Utah Department of Natural Resources, Division of Water Resources; the Nevada Department of Conservation and Natural Resources; and the Arizona Department of Water Resources. Some data from the Bureau of Land Management also are included in this report. Some of the earlier data were published previously by Glancy

and VanDenburgh (1969), Sandberg and Sultz (1985), and Johnson (1995). The study was done to improve the understanding of the hydrology of the area and provide officials with information to help them manage the water resources of the area.

The study area is flanked on the east by the Beaver Dam Mountains, on the west by the Tule Springs Hills, on the south by the Virgin Mountains, and on the north by the Clover Mountains (pl. 1). The study area is in the three corners area of Utah, Nevada, and Arizona and is within the Basin and Range Physiographic Province. The study area includes about 820 mi².

Information about selected wells and springs, including well completion data, water levels, drillers' and geologic logs, and results of chemical analyses is contained in tables 1, 2, and 3. Surface-water and spring site data are listed in tables 4, 5, 6, and 7. Hydrologic-data sites are shown on plate 1. The numbering systems for hydrologic-data sites used in this report are shown in figure 1.

EXPLANATION

Separate numbering systems are used in this report for data-collection sites in Utah, Nevada, Arizona, and in the Arizona part of the Navajo Indian Reservation. The numbering systems for the three States are based on the system of the Bureau of Land Management for land subdivision, which uses survey, quadrant, township, range, section, and position within the section to locate data-collection sites.

Each survey is divided into four quadrants by the intersection of a principal meridian and base line: the upper-case letter A denotes the northeast quadrant; B, the northwest quadrant; C, the southwest quadrant; and D, the southeast quadrant. Nevada does not use this part of the system. Townships are numbered starting at the base line and increase northward and southward. Ranges are numbered starting at the principal meridian and increase eastward and westward. A township defined by township and range numbers is subdivided into 36 sections and numbered as shown. Each section is subdivided into quarter sections, quarter-quarter sections, and quarter-quarter-quarter sections, which specify the location to within a 10-acre tract. For each subdivision of the section, the lowercase letter a denotes the northeast quarter; b, the northwest quarter; c, the southwest quarter; and d, the southeast quarter.

Utah

In Utah, the Bureau of Land Management system of land subdivision is used with two surveys. The Salt Lake Meridian and Salt Lake Base Line are used for all of Utah except for a small area in the northeast part of the State where the Uintah Meridian and Uintah Base Line are used.

The Utah number has the same format as the Arizona number. If there is no letter before the parentheses, the Salt Lake Meridian and Salt Lake Base Line apply. A well site has a number and three letters added as a suffix after the parentheses if a quarter-quarter-quarter section is given. A spring site has a capital letter "S" after the suffix. All other site numbers do not have a suffix.

Nevada

In Nevada, the number used from left to right specifies the township north or south of the Mt. Diablo Base Line, the range east of the Mt. Diablo Meridian, the section, and the subdivision of the section. The subdivision of the section is the same as in Utah and Arizona except that Nevada sections are subdivided four times to specify the location to within a 2.5-acre tract. The suffix is used in the same manner as in Arizona. For example, a well located within the SW1/4NW1/4SW1/4SW1/4 section 32, Township 8 South, Range 71 East, would have the number S8 E71 32ddbd1.

Arizona

The numbering system used in Arizona, except on the Navajo Indian Reservation, is based of the Bureau of Land Management system of land subdivision and the Gila and Salt River Meridian and Gila and Salt River Base Line. Within the parentheses, the capital letter denotes the quadrant and is followed by the township and range numbers. The section number is next, followed by three lowercase letters denoting the quarter section, the quarter-quarter section, and the quarter-quarter-quarter section. If there is more than one data-collection site in the 10-acre tract, consecutive numbers beginning with 1 are added as suffixes, and a spring site has a capital letter "S" after the suffix.

Table 1. Records of selected wells in the Beaver Dam Wash area, Utah, Nevada, and Arizona

[—, no data]

Location: See figure 1 for explanation of numbering systems used for hydrologic-data sites.

Owner or user: Last known owner or user.

Year drilled: R, reported by owner.

Depth of well: R, reported by owner.

Geologic source of water: NS, Navajo Sandstone; CF, Channel fill; MC, Muddy Creek Formation; PR-C, Paleozoic rocks, primarily carbonate; PMC, Tertiary gravels and Quaternary alluvial-fan and tufa deposits that overlie the Muddy Creek Formation.

Casing: R, reported by owner; Finish: P, perforated, upper and lower limits of perforations reported in feet below land surface; O, open end or section left uncased; S, screened interval, in feet below land surface.

Altitude of land surface: Surveyed altitudes are reported in feet and decimal fractions; altitudes interpolated from topographic maps are reported in feet.

Water level: Measured water levels reported in feet, tenths, and hundredths; R, reported but not measured by U.S. Geological Survey;
+ indicates water level above land surface.

Yield: Rate: R, reported, not measured by U.S. Geological Survey; gal/min, gallons per minute.

Other data available: C, chemical analysis (table 3); D, well destroyed; L, drillers' log (table 2).

¹Monthly water-level and water-quality data available through the Bureau of Land Management.

Table 2. Drillers' and geologic logs of selected wells in the Beaver Dam Wash area, Utah and Arizona

Location: See figure 1 for explanation of numbering systems used for hydrologic-data sites.

Thickness: In feet.

Depth: Depth to bottom of interval, in feet below land surface.

			Gravel, cemented85	290

Table 2. Drillers' and geologic logs of selected wells in the Beaver Dam Wash area, Utah and Arizona—Continued

Material	Thickness	Depth	Material	Thickness	Depth			
(B-40-15)4acd—Continued								
Clay, red.....	15	305	Silt and sand, with gravel and clay bed at 340-341 feet.....	6	344			
Gravel, cemented	115	420	Clay with beds of silt and sand at 353 and 360 feet	36	380			
Clay, red.....	70	490	Sand and gravel, with clay and silt	28	408			
(B-40-15)5aaa3			Clay, with silt and sand.....	63	471			
Log by S. Budo			Sand and gravel, sand coarse to fine.....	24	495			
Altitude 1,865 feet			Clay and silt, sand and gravel bed at 510 feet.....	23	518			
Sand and gravel, loose; grey, grey green, black, and reddish brown, some well cemented sand lenses	30	30	Silt and sand, with gravel beds at 520 and 528 feet	20	538			
Conglomerate, cemented gravel volcanic pebbles in gravel, pink reddish brown.....	20	50	Clay, silt, and sand beds.....	52	590			
Gravel similar to above with little cementing, clean with good gradation, good water zone ..	10	60	Sand, with some gravel	9	599			
Gravel, with volcanic pebbles in a clay matrix.....	10	70	(B-41-15)8ada					
Gravel, no clay matrix, good water zone	5	75	Log by Paul Summers,					
Gravel, larger (.75-1.25 inches) with clay matrix.....	19	94	Bureau of Land Management					
Clay	4	98	Altitude 2,285 feet					
(B-40-15)5ada2			Sand, fine, tan	20	20			
Log by Ballard Drilling			Gravel, (.1 to 0.3 inch) composed of various rock types, grey	200	220			
Altitude 1,822 feet			Gravel and sand, grey	20	240			
Sand and gravel.....	30	30	Gravel, rounded, (.3-.5 inch) grey, pebbles	140	380			
Sand.....	5	35	Sand and gravel.....	10	390			
Sand and gravel.....	65	100	Gravel, small grey	10	400			
(B-40-15)5baa			Gravel, with sand	10	410			
Log by Penrod Drilling			Sand and gravel, small, grey	10	420			
Altitude 1,860 feet			Gravel, large, grey.....	30	450			
Topsoil	8	8	Sand and gravel.....	30	480			
Sand and boulders	24	32	Clay, sandy, red, possible Muddy Creek Formation contact	20	500			
Sand and gravel.....	44	76	Sand, reddish.....	20	520			
Bentonite, reddish brown	4	80	Sand, some clay, reddish.....	10	530			
(B-40-15)6cdd			Clay, sandy, reddish.....	10	540			
Log by Dale Wilberg,			Sand, some gravel, red-brown	10	550			
U.S. Geological Survey			Clay, sandy.....	40	590			
Altitude 2,040 feet			Sand with some clay	10	600			
Silt and clay, white, dry reacts with acid,	15	15	(B-41-15)9dad					
Silt and sand, with some clay and gravel, pink.....	18	33	Log by Paul Summers,					
Clay, silt, sand, and some gravel, yellowish brown.....	21	54	Bureau of Land Management					
Sand and gravel.....	7	61	Altitude 2,180 feet					
Silt and clay, with sand beds (4-40 inches thick) reddish brown	60	121	Gravel and sand, grey	20	20			
Sand and gravel.....	21	142	Gravel, some sand, grey	80	100			
Sand with some silt and clay sand, fine to medium	43	185	Sand, some gravel	30	130			
Sand, fine to medium, with one thin gravel bed ..	25	210	Gravel and sand.....	110	240			
Clay and silt; coarser beds 227 and 233 feet.....	31	241	Sand with some gravel	110	350			
Silt and sand.....	36	277	Sand, brown	30	380			
Clay with variable amounts of silt and sand	41	318						
Sand and gravel pea size	10	328						
Clay and silt	10	338

¹Most likely tufa deposits.

Table 3. Chemical analyses of water from selected wells and springs in the Beaver Dam Wash area, Utah, Nevada, and Arizona

[mg/L, milligrams per liter; µg/L, micrograms per liter; —, no data; <, less than]

Location and (or) spring name: See figure 1 for explanation of numbering systems used for hydrologic-data sites; S, number in parentheses is Analyzing agency: USGS, U.S. Geological Survey; BLM, Bureau of Land Management; ADEQ, Arizona Department of Environmental Quality. Geologic source of water: PMC, Tertiary gravels and Quaternary alluvial-fan and tufa deposits that overlie the Muddy Creek Formation; CF, PC, Precambrian rocks.

Discharge: gal/min, gallons per minute; e, estimated.

Temperature: °C, degrees Celsius.

Specific conductance: µS/cm, microsiemens per centimeter at 25 degrees Celsius; all data rounded to USGS standards.

Location and (or) spring name	Analyzing agency	Date	Geo-logic source of water	Dis-charge (gal/min)	Temper-ature water (°C)	Spec-ific con-ductance (µS/cm)	pH, field (stand ard units)	Alka-linity (mg/L as CaCO ₃)	Bicar-bonate (mg/L as HCO ₃)	Nitro-gen, nitrate, total (mg/L as N)	Nitro-gen, NO ₂ +NO ₃ , dis-solved (mg/L as N)	Phos-phorus, dis-solved (mg/L as PO ₄)	Phos-phorus, ortho, dis-solved (mg/L as P)	Hard-ness, total (mg/L as CaCO ₃)	Hard-ness, noncar-bonate (mg/L as CaCO ₃)

Table 4. Chemical analyses of water from selected surface-water sites in the Beaver Dam Wash area, Utah, Nevada, and

[mg/L, milligrams per liter; µg/L, micrograms per liter; —, no data; <, less than; ND, not detected]

Description: (S1), surface-water or spring site number used in table 5 and on plate 1.

Analyzing agency: USGS, U.S. Geological Survey; NEV, State of Nevada; ADEQ, Arizona Department of Environmental Quality; BLM, Temperature: °C, degrees Celsius.

Specific conductance: µS/cm, microsiemens per centimeter at 25 degrees Celsius; all data rounded to U.S. Geological Survey standards.

Solids, sum of constituents, dissolved: e, estimated.

Description	Analyzing agency	Date	Temper-ature water (°C)	Speci-fic con-duct-ance (µS/cm)	pH, field (stand-ard units)	Nitro-gen, nitrate, total (mg/L as N)	NO ₂ +NO ₃ , dis-solved (mg/L as N)	Phos-phate, ortho, dis-solved (mg/L as PO ₄)	Phos-phorus, ortho, dis-solved (mg/L as P)	Hard-ness, total (mg/L as CaCO ₃)	Calcium, dis-solved (mg/L as Ca)

Table 5. Discharge, temperature, and specific conductance of water from selected surface-water and spring sites in the Beaver Dam Wash area, Utah and Arizona

[—, no data]

Surface-water or spring site number: See plate 1 for location of site.

Location: See figure 1 for explanation of numbering systems used for hydrologic-data sites. Listed in downstream order.

Data Source: BLM, Bureau of Land Management; USGS, U.S. Geological Survey; ADEQ, Arizona Department of Environmental Quality.

Discharge: ft³/s, cubic feet per second; e, estimated; all data rounded to U.S. Geological Survey standards.

Specific conductance: $\mu\text{S}/\text{cm}$, microsiemens per centimeter at 25 degrees Celsius; all data rounded to U.S. Geological Survey standards.

Temperature: °C, degrees Celsius.

**EXPLANATION**

- Boundary of study area
- Observation well
- S_n • Spring site—S number indicates spring site number used in table 5
- ▲ U.S. Geological Survey streamflow-gaging station (USGS gage)
- S_n○ Surface-water site—S number indicates surface-water site number used in table 5

Map showing location of selected hydrologic-data sites in the Beaver Dam Wash area, Washington County, Utah, Lincoln County, Nevada, and Mohave County, Arizona
